| Chapter 6 - Flexbox   |
|---|
| Before we look into the CSS flexbox, we will look into float and clear properties.                              |
| The float property float property is simple. It just flows the element towards left/right                       |
| flood: left Flood: right  |
| The clear property Used to clear the float. It specifies what elements can float beside a given element         |
| The CSS flexbox Aims at providing a better way to layout, rolign and askibute space smong items in a container. |
| · Container &  display: flex:   Initialize a flex box  3  1 - cross axis -> Need not be atways vertical         |
| - Flexbox   |

flex Container

flex-direction property
Defines the direction towards which items are laid.
Can be row, you-reverse, Column, Column-reverse
diputt

flex properties for parent (flex container)
following are the properties for the flex parent:

flex-wrap: can be wrap, nowrap, wrap-reverse. Wrap items
as needed with this property.

2 justify-Content: Defines alignment along main axis-

3 align-items: Defines alignment along cross axis.

4 align-content: Aligns a flex container's lines when there is extra space in the cross saxis.

Flex properties for the children (flex i tems)
following are the properties for the flex children

1 order: Controls the order in which the items appear in the flex Container

2 align-self: Allows default alignment to be overridden for the individual flex items.

3 flex-grow: Defines the ability for a flex item to grow

| 4   | flex-shrink: Specifies how much a flex item will shrink relative to the rest of the flex items.  |            |  |
